## CHALLENGE # 1: GOAL

- Goal

My goal is to create a portfolio website using the basics of HTML that displays my personality through the themes and fonts that I'll be using.

I want to create a simple portfolio website that I can modify and can be used in the future for displaying my life's journey or making it easier for companies to find me and view the talents and personality that I possess.

- Plans

I'm planning on using colors and fonts that showcase my interests and what inspired and motivated me to take a Bachelor of Science in Computer Science, even though many people warned me that computer science is a very broad and complicated college course.

I'm planning on creating a portfolio website that can easily be viewed and understood by anyone in order for me to make a good impression on those who'll view my website.
